

Checklist of Montana Vascular Plants

June 3, 2013

By
Scott Mincemoyer
Montana Natural Heritage Program
Helena, MT

Note: Some of the values for "Origin" and "C-Values" are out-of-date. Please see the MTNHP website for an updated "**2015 C-value Spreadsheet**" <http://mtnhp.org/plants>

This checklist of Montana vascular plants is organized by Division, Class and Family. Species are listed alphabetically within this hierarchy. Synonyms, if any, are listed below each species and are slightly indented from the main species list. The list is composed of species which have been documented in the state and are vouchered by a specimen collection deposited at a recognized herbaria. Additionally, some species are included on the list based on their presence in the state being reported in published and unpublished botanical literature or through data submitted to MTNHP. The checklist is made possible by the contributions of numerous botanists, natural resource professionals and plant enthusiasts throughout Montana's history. The taxonomy and nomenclature used in this checklist relies heavily on the Manual of Montana Vascular Plants by Peter Lesica, Grasses of Montana by Lavin and Seibert and published volumes of the Flora of North America (FNA 1993+) but does not strictly follow any one of them.

The Checklist of Montana Vascular Plants can be viewed or downloaded from the Montana Natural Heritage Program's website at: <http://mtnhp.org/plants/default.asp>

This publication will be updated periodically. Please send comments and suggested revisions to the author at smincemoyer@mt.gov.

Number of Taxa Recognize

Families: 134
Genera: 730
Species: 2571
Infraspecific Taxa: 305
Hybrid Taxa: 16
Unique Taxa: 2892
Native: 2314
Exotic: 435

10 Largest Families in Flora

Asteraceae: 379 species
Poaceae: 248
Cyperaceae: 175
Brassicaceae: 145
Fabaceae: 132
Rosaceae: 100
Caryophyllaceae: 71
Plantaginaceae: 69
Ranunculaceae: 69
Amaranthaceae: 57

10 Largest Genera in Flora

Carex: 130 species
Astragalus: 49
Erigeron: 37
Salix: 34
Juncus: 31
Penstemon: 31
Senecio: 29
Potentilla: 28
Ranunculus: 28
Polygonum: 24

*The number of Native and Exotic Taxa may not equal the number of Unique Taxa due to the uncertain origin of some taxa and due to some taxa, which are only reported for Montana, being categorized as undetermined.

Additional Data Columns

Global and State Status Ranks as assigned by NatureServe and the Montana Natural Heritage Program are included for each species.

Origin refers to the status of the species in Montana. For species in which there is uncertainty as to its origin in the state, a value of Unknown/Undetermined is given.

State Status: This column shows the status of each species in the state, if any. Status designations include Species of Concern, Potential Species of Concern, Status Under Review and Reported taxa. Status Under Review is a designation that highlights those species which are in need of additional information to reliably assign a State Rank or Status or that may be of questionable taxonomic status.

Coefficients of Conservatism values (C-values) are primarily from Jones (2005). These values are used in Floristic Quality Assessments and are a ranking of a species' ability to tolerate disturbance or conversely, a species fidelity to high-quality natural areas.

Wetland Indicator Status ranks are from the 2012 National Wetland Plant List (NWPL) and status ranks are provided for the three zones or regions in Montana: Western Mountains, Valleys and Coast (WMVC); Great Plains (GP) and Arid West (AW) (Lichvar 2012).

NRCS Code: Unique alpha-numeric code assigned to each plant taxa by the USDA NRCs PLANTS Database.
