

ANIMAL SPECIES OF SPECIAL CONCERN

FEBRUARY, 1994

The Montana Natural Heritage Program (MTNHP) is conducting an inventory of the elements of biological diversity in Montana. The inventory focuses on plant species, animal species, and plant communities that are rare, endemic, disjunct, threatened, or endangered throughout their range or in Montana, vulnerable to extirpation from Montana, or in need of further research.

The attached list of animal species of special concern in Montana is used to direct data acquisition by the MTNHP, and provide information to others on the current status of these species. It has been developed largely from information supplied by field research and inventories, and input from knowledgeable individuals.

Background information was obtained from sources such as Vertebrate Species of Special Interest or Concern (Flath 1984), P. D. Skaar's Montana Bird Distribution (Bergeron, et al. 1992), Fishes of Montana (Brown 1971), the Notice of Review for vertebrates, and from the scientific literature, personal contacts, and museum specimens. This list is dynamic and is periodically revised as new data become available to the MTNHP.

Written comments and suggestions are continually needed on this list, particularly regarding recommended additions or deletions. New locational information for any of these taxa is also being solicited.

The MTNHP can supply current locational information and status data for most of these taxa.

* * *

Taxa are evaluated and ranked by the Heritage Program on the basis of their global (range-wide) status, and their state-wide status.

These ranks are used to determine protection and data collection priorities, and are revised as new information becomes available.

A scale of 1 (critically imperiled) to 5 (demonstrably secure) is used for these ranks, and each species is assigned the appropriate combination of global and state ranks.

Example: common loon = G5 / S3 (i.e., species is demonstrably secure globally; in Montana is found within a restricted range).

Global and state ranks are assigned according to a standardized procedure used by all Natural Heritage Programs, and are defined below.

Global/State

Rank	Definition (G = Range-wide; S = Montana)
G1 S1	Critically imperiled because of extreme rarity (5 or fewer occurrences, or very few remaining individuals), or because of some factor of its biology making it especially vulnerable to extinction.
G2 S2	Imperiled because of rarity (6 to 20 occurrences), or because of other factors demonstrably making it very vulnerable to extinction throughout its range.
G3 S3	Either very rare and local throughout its range, or found locally (even abundantly at some of its locations) in a restricted range, or vulnerable to extinction throughout its range because of other factors; in the range of 21 to 100 occurrences.
G4 S4	Apparently secure, though it may be quite rare in parts of its range, especially at the periphery.
G5 S5	Demonstrably secure, though it may be quite rare in parts of its range, especially at the periphery.
GU SU	Possibly in peril, but status uncertain; more information needed.
GH SH	Historically known; may be rediscovered.
GX SX	Believed to be extinct; historical records only, continue search.

Other codes:

- A Accidental in the state; including species (usually birds or butterflies) recorded very infrequently, hundreds or thousands of miles outside their usual range.
- B A state rank modifier indicating breeding status for a migratory species. **Example: S1B,SZN** -- breeding occurrences for the species are ranked S1 (critically imperiled) in the state, nonbreeding occurrences are not ranked in the state.
- E An exotic established in the state; may be native in nearby regions.
- HYB Element represents a hybrid of species.
- N A state rank modifier indicating non-breeding status for a migratory species. **Example: S1B,SZN** -- breeding occurrences for the species are ranked S1 (critically imperiled) in the state, nonbreeding occurrences are not ranked in the state.
- P Indicates the element may potentially occur in the state.
- Q Taxonomic questions or problems involved, more information needed; appended to the global rank.

- R Reported in the state; but lacking documentation which would provide a basis for either accepting or rejecting the report.
- T Rank for a subspecific taxon (subspecies, variety, or population); appended to the global rank for the full species.
- Z Ranking not applicable.

USF&WS (USESA) Status: The symbols in this column denote the categories defined in the U.S. Fish and Wildlife Service Notices of Review (1980, 1983, 1985, 1990), and indicate the status of a taxon with respect to the federal Endangered Species Act of 1973:

- LE (Listed) Endangered
- LT (Listed) Threatened
- E/SA Treat as endangered because of similarity of appearance.
- P Proposed E or T
- C1 Notice of Review, Category 1 (substantial biological information on file to support the appropriateness of proposing to list as endangered or threatened).
- C2 Notice of Review, Category 2 (current information indicates that proposing to list as endangered or threatened is possibly appropriate, but substantial biological information is not on file to support an immediate ruling).
- C2* Category 2, and the taxon is possibly extinct.
- 3A Taxa for which the USFWS has persuasive evidence of extinction.
- 3B Names that, on the basis of current taxonomic understanding, do not represent taxa meeting the Endangered Species Act's definition of "species."
- 3C Taxa that have proven to be more abundant or widespread than was previously believed, and/or those that are not subject to any identifiable threat.
- NL Not listed/no designation. (See note below.)

Note: A species can have more than one federal designation if the species' status varies within its range. In these instances the Montana designation is listed first.

Examples: Bald Eagle = LELT. Species is Listed Endangered in Montana; elsewhere in its range it may be Listed Threatened.

Cutthroat Trout = C2NL. Species is a Category 2 in Montana; elsewhere in its range it may not have USF&WS designation.

Fisher = NLC2. Species has no USF&WS designation in Montana; elsewhere in its range it may be a Category 2.

USFS Status: The status of species in Montana as defined by the U.S. Forest Service manual (2670.22). These taxa are listed as such by the Regional Forester (Northern Region) on Montana National Forests.

State Status: These symbols give the state legal status of vertebrates as listed in the 1989 Statutes of Montana for the Department of Fish, Wildlife and Parks.

GA = game animal
 GF = game fish
 FB = fur bearing animal
 MB = migratory bird
 UB = upland game bird
 E = endangered
 NG = nongame wildlife
 P = protected species
 U = unprotected species

Management Status:

CD = closed season
 RH = restricted harvest
