# American Bison (*Bos bison*) Conservation Status Rank Summary

May 13, 2024

For details on assessment and ranking methodology, see: <u>Conservation Status Assessment Definitions, Process,</u> <u>Rank Factors, and Calculation of State Ranks for Montana Species</u>

Rank Factor	Date Assessed	Value	Score	Data Source	Comments	
Rarity						
Range Extent	2024-05-13	Y: 3205.1 km²	2.360	MTNHP Range Maps	None	
Area of Occupancy			-		Factor not used in ranking.	
Number of Occurrences	2024-05-13	6	1.380	MTNHP Databases	None	
<b>Population Size</b>			-		Factor not used in ranking.	
# of Occurrences in Good Condition	2024-05-13		2.200		Species occurs outside of the National Park on federally managed forest lands	
% of Area Occupied in Good Condition			-		Factor not used in ranking.	
Environmental Specificity			-		Factor not used in ranking.	
	Rarity	is calculated by a ( (2.36 × 1) + (1.3		•		
Trends						
Short-term Trend	2018-05-03		[0.000, 0.070]	MTNHP Species Rank Data Table	The Yellowstone National Park herd is managed, and stable. Tribes are reintroducing bison to areas and allowing them to exist in close to a natural state   Methodology: NS (2003)   Original Score: E	
Long-term Trend	2018-05-03		[-0.500, -0.400]	MTNHP Species Rank Data Table	Since European arrival bison have been extirpated across almost all of their historic range within the state. Declines have exceeded 90% in both occupied range and population.   Methodology: NS (2003)   Original Score: A	
Trends score is calculated by summing weighted short and long-term trend scores: ( ([0.00, 0.07] × 2) + ([-0.50, -0.40] × 1) ) = [-0.50, -0.26]						

# **Rarity and Trends**

## Threats

Rank Factor	Date Assessed	Value	Value Score		Comments			
Threats								
Overall Threat Impact		Low/No Threats	.ow/No Threats 5.500		Recovery of robust wild populations is directly controlled by management of this species. Wild populations within Montana would increase if animals were permitted to occupy previous habitat and reintroductions to establish other populations were implemented.			
Intrinsic Vulnerability			-		Factor not used in ranking.			
Threat score is calculated from Overall Threat Impact when available or Intrinsic Vulnerability if not: ( 5.50 ) = 5.50								

#### **Individual Threats Data**

Threat Category	Date Assessed	Impact Score	Scope	Severity	Immediacy	Comments		
No Threat Identified	2024-05-13	Low	None	None	None	None		
Threat Tally: 0 - Very High, 0 - High, 0 - Medium, 1 - Low Overall Threat Impact* = Low/No Threats								

\*See <u>Conservation Status Assessment Definitions</u>, <u>Process</u>, <u>Rank Factors</u>, <u>and Calculation of State Ranks for Montana Species</u> for calculation of Overall Threat Impact based on the number and impact of individual threats.</u>

### **Conservation Status Rank Calculation**

#### Raw score

Rarity: (2.04 × 70%) + Threats: (5.50 × 30%) + Trends: ([-0.50, -0.26]) = [2.58, 2.82]

Calculated Rank: S3

Accepted Rank	\$3				
Date Approved	2024-09-30				
Approval Authority	Montana Species of Concern Committee				
Rank Justification	Species was hunted close to extinction in the 1800s, and has been relegated to National Parks and private herds since. Currently the species is relatively stable and being reintroduced to several reservations. No threats are known.				

### **Supplementary Information**

Montana Natural Heritage Program. 2021. Conservation Status Assessment Definitions, Process, Rank Factors, and Calculation of State Ranks for Montana Species. 18 p. https://mtnhp.mt.gov/docs/Montana State\_Rank\_Criteria\_20211201.pdf

### **Information Needs**

Information needs are assessed by considering the availability of factors used to assess species status as well as the quality of these assessments. Current information availability and quality to inform Conservation Status Rank for this species are highlighted.

Rank	Assessment	Malua	Criteria				
Factor	Category	Value					
General	General Status Quality		Calculated rank has low uncertainty and is represented by a single rank (e.g. S3); accepted rank may be adjusted to a range rank (e.g. S2S3)				
Status	Status Quanty	Poor	Rank assessed as SU or calculated rank has notable uncertainty and corresponds to a range rank with 2 or more values (e.g. S2?, S1S3, or S4S5)				
			Range polygon adequately represents area of probable occupancy and does not include substanti- unoccupied areas; range may be adequately defined and still include areas of unsuitable habitat (e.g. mountain ranges for plains species)				
	Range Quality	Marginal	Range polygon defined, but may include or exclude notable areas where the species may or may not occur on the landscape				
Rarity		Poor	Range polygon not defined				
		Adequate	Species-habitat relationship is well-defined (e.g. relevant literature or robust habitat model available)				
	Habitat Quality	Marginal	Understanding of species-habitat relationship is adequate among some but not all habitats (e.g. literature covers similar habitats outside of Montana or habitat model performance is only somewhat adequate)				
		Poor	Species-habitat relationship is not well understood				
		Adequate	Threat Impact is a single value (including "Unthreatened")				
Threats	Threat Quality	Marginal	Threat Impact assessed at more than one value (e.g. "High - Medium")				
Threats		Poor	Threat Impact is Unknown but Intrinsic Vulnerability is assessed				
		Unknown	Threat Impact is Unknown and Intrinsic Vulnerability is not assessed				
		Current	Short-term Trend assessment date less than 10 years old				
	Recency	Out of Date but Adequate	Short-term Trend assessment date is more than 10 years old or Unknown, but species is Unthreatened				
		Out of Date	Short-term Trend assessment date more than 10 years old				
		Not Available	Short-term Trend data are not available				
Trends	Trend Quality	Sufficient	Short-term Trend assessed at a single value or multiple values with a minimum trend greater than -10% (stable or increasing)				
		Unknown but Sufficient	Short-term Trend is Unknown, but species is Unthreatened				
		Poor	Short-term Trend is less than -10% (in decline) with two or more values selected				
		Unknown	Short-term Trend is Unknown				

#### Summary of Information Availability

Data to assess status are available

Summary of Information Needs

No additional information are needed at this time.

## **Additional Threat Details**

The table below contains the complete threats assessment for this species. While the Conservation Status Rank Calculation is based on cumulative, broadly categorized (Level 1) threats data, threats are assessed and tracked for more specifically categorized (Level 2) threats when available.

Threat Category	Date Assessed	Assessed By	Data Source	Scope	Severity	Imme- diacy	Comments
No Threat Identified - 0	2024-05-13	None	None	None	None	None	None
