

Black-tailed Jackrabbit (*Lepus californicus*)

Conservation Status Rank Summary

September 12, 2024

For details on assessment and ranking methodology, see: [Conservation Status Assessment Definitions, Process, Rank Factors, and Calculation of State Ranks for Montana Species](#)

Rarity and Trends

Rank Factor	Date Assessed	Value	Score	Data Source	Comments
Rarity					
Range Extent	2024-09-12	Y: 10581.4 km ²	3.140	MTNHP Range Maps	None
Area of Occupancy	2024-09-12	367 4km ² cells	3.440	MTNHP Modeling	None
Number of Occurrences			-		Factor not used in ranking.
Population Size			-		Factor not used in ranking.
# of Occurrences in Good Condition			-		Factor not used in ranking.
% of Area Occupied in Good Condition			-		Factor not used in ranking.
Environmental Specificity			-		Factor not used in ranking.
Rarity is calculated by averaging weighted factor scores: $((3.14 \times 1) + (3.44 \times 2)) / 3 = 3.34$					
Trends					
Short-term Trend	2012-01-04		-	MTNHP Species Rank Data Table	Factor not used in ranking. No data on trends available. Methodology: NS (2003) Original Score: U
Long-term Trend	2012-01-04		[-0.070, 0.070]	MTNHP Species Rank Data Table	Open habitats with at least some shrub cover have probably been stable (+/-25%) since European arrival. Methodology: NS (2003) Original Score: E
Trends score is calculated by summing weighted short and long-term trend scores: $(([-0.07, 0.07] \times 1)) = [-0.07, 0.07]$					

Threats

Rank Factor	Date Assessed	Value	Score	Data Source	Comments
Threats					
Overall Threat Impact		Unknown	-		Factor not used in ranking.
Intrinsic Vulnerability			-		Factor not used in ranking.
No threat or vulnerability data used in ranking this species					

Individual Threats Data

Threat Category	Date Assessed	Impact Score	Scope	Severity	Immediacy	Comments
No individual threats data used in ranking this species						

Conservation Status Rank Calculation

Raw score

Rarity: $(3.34 \times 100\%)$ + Threats: (0.00) + Trends: $([-0.07, 0.07])$ = [3.27, 3.41]

Calculated Rank: S3

Accepted Rank	SU
Date Approved	2018-09-25
Approval Authority	Montana Species of Concern Committee
Rank Justification	Species is found in a limited area of southwest Montana. It is very infrequently observed (last observation 2019) and additional data are needed to assess status.

Information Needs

Information needs are assessed by considering the availability of factors used to assess species status as well as the quality of these assessments. Current information availability and quality to inform Conservation Status Rank for this species are highlighted.

Rank Factor	Assessment Category	Value	Criteria
General Status	Status Quality	Adequate	Calculated rank has low uncertainty and is represented by a single rank (e.g. S3); accepted rank may be adjusted to a range rank (e.g. S2S3)
		Poor	Rank assessed as SU or calculated rank has notable uncertainty and corresponds to a range rank with 2 or more values (e.g. S2?, S1S3, or S4S5)
Rarity	Range Quality	Adequate	Range polygon adequately represents area of probable occupancy and does not include substantial unoccupied areas; range may be adequately defined and still include areas of unsuitable habitat (e.g. mountain ranges for plains species)
		Marginal	Range polygon defined, but may include or exclude notable areas where the species may or may not occur on the landscape
		Poor	Range polygon not defined
	Habitat Quality	Adequate	Species-habitat relationship is well-defined (e.g. relevant literature or robust habitat model available)
		Marginal	Understanding of species-habitat relationship is adequate among some but not all habitats (e.g. literature covers similar habitats outside of Montana or habitat model performance is only somewhat adequate)
		Poor	Species-habitat relationship is not well understood
Threats	Threat Quality	Adequate	Threat Impact is a single value (including "Unthreatened")
		Marginal	Threat Impact assessed at more than one value (e.g. "High - Medium")
		Poor	Threat Impact is Unknown but Intrinsic Vulnerability is assessed
		Unknown	Threat Impact is Unknown and Intrinsic Vulnerability is not assessed
Trends	Recency	Current	Short-term Trend assessment date less than 10 years old
		Out of Date but Adequate	Short-term Trend assessment date is more than 10 years old or Unknown, but species is Unthreatened
		Out of Date	Short-term Trend assessment date more than 10 years old
		Not Available	Short-term Trend data are not available
	Trend Quality	Sufficient	Short-term Trend assessed at a single value or multiple values with a minimum trend greater than -10% (stable or increasing)
		Unknown but Sufficient	Short-term Trend is Unknown, but species is Unthreatened
		Poor	Short-term Trend is less than -10% (in decline) with two or more values selected
		Unknown	Short-term Trend is Unknown

Summary of Information Availability

Species is poorly documented across much of its range. Threats are not well known, and trend is uncertain. Range is probably good, but there are no recent observations within areas of historic occupancy.

Summary of Information Needs

Monitoring has been attempted using camera traps and genetic identification of scat samples. Efforts to document the species should continue to explore trend.

Additional Threat Details

The table below contains the complete threats assessment for this species. While the Conservation Status Rank Calculation is based on cumulative, broadly categorized (Level 1) threats data, threats are assessed and tracked for more specifically categorized (Level 2) threats when available.

Threat Category	Date Assessed	Assessed By	Data Source	Scope	Severity	Immediacy	Comments
Invasive & Other Problematic Species, Genes & Diseases - 8.1 - Invasive Non-Native/Alien Species/Diseases	2024-09-12	Dan Bachen	USDA APHIS 2020	Pervasive	Unknown	Moderate	Species is susceptible to Rabbit Hemorrhagic Disease Virus. Impacts of the disease are currently unknown
No threats data available for this species
