# Idaho Pocket Gopher (*Thomomys idahoensis*) Conservation Status Rank Summary

September 16, 2024

For details on assessment and ranking methodology, see: <u>Conservation Status Assessment Definitions, Process,</u>
<u>Rank Factors, and Calculation of State Ranks for Montana Species</u>

## **Rarity and Trends**

Rank Factor	Rank Factor Date Assessed		Score	Data Source	Comments	
Rarity						
Range Extent	2024-01-17	Y: 24248.1 km²	3.930	MTNHP Range Maps	None	
Area of Occupancy			-		Factor not used in ranking.	
Number of Occurrences	2024-09-16	12	1.380	MTNHP Databases	12 areas with observations	
Population Size			-		Factor not used in ranking.	
# of Occurrences in Good Condition			-		Factor not used in ranking.	
% of Area Occupied in Good Condition			-		Factor not used in ranking.	
Environmental Specificity			-		Factor not used in ranking.	

Rarity is calculated by averaging weighted factor scores:  $((3.93 \times 1) + (1.38 \times 1)) / 2 = 2.66$ 

Trends								
Short-term Trend	2012-01-04		-	MTNHP Species Rank Data Table	Factor not used in ranking. No data on trends available.   Methodology: NS (2003)   Original Score: U			
Long-term Trend	2018-05-03		-	MTNHP Species Rank Data Table	Factor not used in ranking. Not enough information exists on the distribution, habitat associations, or population or occupancy indices to assess long term trend   Methodology: NS (2003)   Original Score: U			

No trend data used in ranking this species

## **Threats**

Rank Factor	Date Assessed	Value	Score	Data Source	Comments			
Threats								
Overall Threat Impact		Unknown	-		Factor not used in ranking.			
Intrinsic Vulnerability			-		Factor not used in ranking.			
No threat or vulnerability data used in ranking this species								

## **Individual Threats Data**

Threat Category	Date Assessed	Impact Score	Scope	Severity	Immediacy	Comments		
No individual threats data used in ranking this species								

#### **Conservation Status Rank Calculation**

#### Raw score

Rarity:  $(2.66 \times 100\%)$  + Threats: (0.00) + Trends: (0.00) = 2.66

Calculated Rank: S3

Accepted Rank	SU
Date Approved	2024-09-29
Approval Authority	Montana Species of Concern Committee
Rank Justification	Species has been infrequently observed across southwestern Montana with just 4 observations since 1970. Significant portions of potentially suitable habitat lack observations. Threats and trends are unknown.

#### **Information Needs**

Information needs are assessed by considering the availability of factors used to assess species status as well as the quality of these assessments. Current information availability and quality to inform Conservation Status Rank for this species are highlighted.

Rank	Assessment		Criteria				
Factor	Category	Value					
General	General Status Quality		Calculated rank has low uncertainty and is represented by a single rank (e.g. S3); accepted rank may be adjusted to a range rank (e.g. S2S3)				
Status			Rank assessed as SU or calculated rank has notable uncertainty and corresponds to a range rank with 2 or more values (e.g. S2?, S1S3, or S4S5)				
			Range polygon adequately represents area of probable occupancy and does not include substantial unoccupied areas; range may be adequately defined and still include areas of unsuitable habitat (e.g. mountain ranges for plains species)				
	Range Quality	Marginal	Range polygon defined, but may include or exclude notable areas where the species may or may not occur on the landscape				
Rarity		Poor	Range polygon not defined				
		Adequate	Species-habitat relationship is well-defined (e.g. relevant literature or robust habitat model available)				
	Habitat Quality	Marginal	Understanding of species-habitat relationship is adequate among some but not all habitats (e.g. literature covers similar habitats outside of Montana or habitat model performance is only somewhat adequate)				
		Poor	Species-habitat relationship is not well understood				
		Adequate	Threat Impact is a single value (including "Unthreatened")				
Threats	Throat Quality	Marginal	Threat Impact assessed at more than one value (e.g. "High - Medium")				
inreats	Threat Quality	Poor	Threat Impact is Unknown but Intrinsic Vulnerability is assessed				
		Unknown	Threat Impact is Unknown and Intrinsic Vulnerability is not assessed				
		Current	Short-term Trend assessment date less than 10 years old				
	Recency	Out of Date but Adequate	Short-term Trend assessment date is more than 10 years old or Unknown, but species is Unthreatened				
		Out of Date	Short-term Trend assessment date more than 10 years old				
Trends		Not Available	Short-term Trend data are not available				
	Trend Quality	Sufficient	Short-term Trend assessed at a single value or multiple values with a minimum trend greater than -10% (stable or increasing)				
		Unknown but Sufficient	Short-term Trend is Unknown, but species is Unthreatened				
		Poor	Short-term Trend is less than -10% (in decline) with two or more values selected				
		Unknown	Short-term Trend is Unknown				

#### **Summary of Information Availability**

Species is poorly documented and significant portions of its range lack observations. It has not been observed or reported since 2012. Threats are poorly described, and trend is unknown.

#### **Summary of Information Needs**

Structured surveys are needed across the species range, both at historic sites as well as within areas of suitable habitat without previous detections.

## **Additional Threat Details**

The table below contains the complete threats assessment for this species. While the Conservation Status Rank Calculation is based on cumulative, broadly categorized (Level 1) threats data, threats are assessed and tracked for more specifically categorized (Level 2) threats when available.

Threat Category	Date Assessed	Assessed By	Data Source	Scope	Severity	Imme- diacy	Comments
No Threat Identified - 0.5 - Unknown/Undetermined Threat	2024-09-16	None	None	None	None	None	None
No threats data available for this species
